Election/Restrictions

1. This application is in condition for allowance except for the presence of claims 9, 14 and 15 directed to an invention non-elected with traverse in the reply filed on November 5, 2007. Applicant is given ONE MONTH or THIRTY DAYS from the date of this letter, whichever is longer, to cancel the noted claims or take other appropriate action (37 CFR 1.144). Failure to take action during this period will be treated as authorization to cancel the noted claims by Examiner's Amendment and pass the case to issue. Extensions of time under 37 CFR 1.136(a) will not be permitted since this application will be passed to issue.

The prosecution of this case is closed except for consideration of the above matter.

2. Applicant's election with traverse of Group I in the reply filed on 11/05/2007 is acknowledged. The traversal is on the ground(s) that the only significant difference between Group I and Group II is the incorporation of the bearings in the processing machine. This is not found persuasive because as was indicated in the previous Office action these Groups are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not depend on the structures and structural relationships recited for the bearing arrangement, e.g., the second bearing not fixedly

connected to the frame. The subcombination has separate utility such as ram and punch application (cited and applied reference).

The requirement is still deemed proper and is therefore made FINAL.

Allowable Subject Matter

3. Claims 1, 2, and 5-8 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter: the elements/structures and structural relationships as recited in claim 3, and 4 (claim 2 plus the spring), place these claims in condition for allowance, and since while a float bearing as recited is considered obvious, such bearing incorporated within a processing machine, as recited is considered novel and such modifications would be hindsight.
